

Linka Energy hires new CTO

The company from west Jutland has from October 1, 2019 hired Agner Lund as CTO

Agner Lund has for many years been one of Linka Energy's business partners.

With this addition on the technical front, Linka has upgraded with a strong competence in the development of biomass boilers.

"This employment is part of our company's growth strategy and Agner will be a vital technical resource as our projects grows increasingly more complex", says Ceo Thomas Gaardbo.

Agners primary role will be to further develop Linkas boiler technology and he will be part of new projects in an advisory capacity.

Agner has worked for the boiler vendor, Danstoker A/S for the last 25 years, through this work he has gained thorough knowledge of Linkas technology and has acted as a link between the two companies.

But this is not the first time Linka has had the pleasure of working with Agner Lund, as he was an employee at Linka back in 1997-99, at the time when Erling Jensen was Ceo. It was precisely the collaboration between Erling Jensen and Agner Lund that led to the development of Linkas well-known LINKA H-boiler.
